ABSTRACT

The genus-group name *Chermes* Linnaeus 1758 has been suppressed, but an accounting of the various nominal species described in combination with it has not been presented until now. Nominal species of *Chermes* are found in 13 families of three major lineages of Sternorrhyncha (Aphidomorpha, Coccoidea, Psylloidea). Eleven available names remain unplaceable (*incertae sedis nomina dubia*) and to date do not appear in the various Sternorrhyncha catalogues. In order to clarify their status, we here present an annotated list of the 137 nominal species-group names originally described in combination with *Chermes*. We provide the original bibliographic citation and an assessment of the current status of each name.

The genus name *Chermes* Linnaeus 1758 was suppressed under the Plenary Powers of the International Commission on Zoological Nomenclature (Evans and China 1965) following a petition by Victor Eastop (1963). Prior to that, the *Chermes* name had had an unfortunate history, having been used actively for three discrete groups of Sternorrhyncha (Hemiptera), aphids, including adelgids and phylloxerids (Aphidomorpha), psyllids (Psylloidea), and scale insects (Coccoidea), and having had three different species selected as type.

In addition, one unavailable name, *C. aceris ovatus* Geoffroy 1762, today refers to a whitefly species, *Aleyrochiton aceris* (Modeer 1778) (Sternorrhyncha: Aleyrodidae), and one available name, *C. graminis* L. 1758, has been suggested as a psocid (Psocodea). Eastop (1963) describes the complex history of the genus.

In the 10th Edition of *Systema Naturae*, Linnaeus (1758:453) described the genus *Chermes* with the following characters: “*Rostrum pectorale*”

(rostrum on the breast), “*Antennae thorace longiores*” (antennae longer than thorax), “*Alae IV deflexae*” (four deflexed wings), “*Thorax gibbus*” (humped thorax), and “*Pedes saltatorii*” (jumping legs). The last of these characters leaves little doubt about the taxonomic affinity of *Chermes* to psyllids. The decision by Geoffroy (1762) to replace *Chermes* with *Psylla* was motivated by the use in French of the word “*kermès*” for some scale insects used for making dye. The use of *Psylla* was quickly adopted and largely accepted, with the exceptions of Scopoli (1763), Schrank (1789), Fabricius (1803), Schmidberger (1836), Zetterstedt (1828, 1840) and Thompson (1877).

The description of the antennae and legs in the original *Chermes* description excludes adelgids (Aphidomorpha: Adelgidae), but the largest number of species, including the most recently described, were proposed for that family. All but three of the *Chermes* species-group names proposed for aphids (*C. ulmi* L. 1758, *C. fagi* L. 1761 and *C. castaneae*

Haldeman 1850) are currently placed in the aphid family Adelgidae. Havill and Footit (2007) provided a list of valid adelgid species but did not mention names they considered invalid.

Linnaeus (1758:455) defined the genus *Coccus* as follows: “*Rostrum pectorale*” (rostrum on the breast), “*Abdomen postice setosum*” (abdomen with posterior setae), and “*Alae II erectae masculi, Feminae apterae*” (males with 2 erect wings, females apterous). This definition still holds for most species of scale insects now included in the superfamily Coccoidea. In contrast, two characters of *Chermes*, as defined by Linnaeus (1758:453), wings deflexed numbering four and jumping legs, do not apply to scale insects. There certainly are none at present with four wings. Because Linnaeus’s description of *Coccus* was so precise, it is difficult to understand why many early authors listed or described scale insects in the genus *Chermes* for well over 100 years afterwards.

Linnaeus (1758) listed 14 species in his new genus *Chermes*. Nine of them are now considered as psyllids, two as aphids, and three remain uncertain with regard to their current taxonomic status. The first of Linnaeus’s (1758) species was *C. graminis*, a name of unknown taxonomic position. Linnaeus’s original observations of *C. graminis* may have been that of any of the Sternorrhyncha discussed here, or perhaps even a psocid (Psocodea), *Kolbia quisquiliarum* Bertkau 1882:129 according to Laing (1951) or *Trichopsoccus dalii* (McLachlan 1867:272) according to Pearman (as cited in Laing 1951). Currently, no psocid name has been formally combined with *Chermes* (Lienhard and Smithers 2002, Lienhard *pers. comm.*). The most recently described *Chermes* species was *C. ishiharai* Inouye 1936, today considered a subspecies of *Adelges pectinatae* (Cholodkovsky 1888).

In all, 137 original species-group names have been proposed in combination with *Chermes*. Certain authors stand out for having established large numbers, namely Boisduval (16 scale insects), Cholodkovsky (12 aphids), and Linnaeus (12 psyllids). Geoffroy’s 1762 work was suppressed for the purposes of nomenclature by the ICBN, for failing to conform to binomial standards (Hemming 1954); this work thus contributes a large number of unavailable *Chermes* names.

Many of the nominal species described in combination with *Chermes* are themselves valid or can be associated with valid taxa, and are so listed in the principal Sternorrhyncha catalogues (Ben-Dov et al. 2013, Favret 2013, Ouvrard 2013). However, the scientific literature contains a number of *Chermes* names that have remained problematic, unclaimed by any taxonomic community. The present list is intended to clarify the status of the nominal species described within the genus *Chermes*, especially those that have not been treated elsewhere. The list contains 47 names currently placed as aphids (three families of Aphidoidea), 30 as scale insects (five families of Coccoidea), and 29 as psyllids (five families of Psylloidea); 19 names are unavailable and 12 available names remain unplaced (here listed as *nomina dubia*). Table 1 summarizes the numbers.

ACKNOWLEDGMENTS

The authors thank Gary L. Miller and Andrew Carmichael (Systematic Entomology Laboratory, US Department of Agriculture [USDA], Beltsville, MD), Andrey Stekolshchikov (Russian Academy of Sciences, St. Petersburg), and Masakazu Sano (Okinawa City Municipal Museum) for assistance with literature references. Charles Lienhard (Natural History Museum of Geneva) dispelled our notions that *Chermes graminis* L. or *C. lapidarius* F. might be psocids. Gregory A. Evans (USDA, Animal and Plant Health Inspection Service, Beltsville, MD) and Jon Martin (Natural History Museum, London) were very helpful in providing information on whiteflies. Daniel Burckhardt’s (Naturhistorisches Museum Basel, Switzerland) suggestions for jumping plant lice were much appreciated.

LIST OF *CHERMES* SPECIES***abieticola***ns Thomas 1879: 156*Objective status*: available and valid*Subjective status*: junior synonym of *Pineus**pinifoliae* (Fitch 1858: 741) (Aphidomorpha

 (Aphidomorpha Adelgidae)
- pini*** Goeze 1778: 263
Objective status: available and valid
Subjective status: valid as *Pineus pini*
 (Aphidomorpha Adelgidae)
Remarks: the species is usually attributed to Macquart (1819: 86) but Goeze provides a valid binomial and an indication to both Geoffroy (1762) and Linnaeus (1746).
- pinifoliae*** Fitch 1858: 741
Objective status: available and valid
Subjective status: valid as *Pineus pinifoliae*
 (Aphidomorpha Adelgidae)
- populi*** Del Guercio 1900: 81
Objective status: available, *nomen dubium*
Subjective status: placement unknown
- praecox*** Cholodkovsky 1898: 28
Objective status: available and valid
Subjective status: valid as *Pineus praecox*
 (Aphidomorpha Adelgidae)
Remarks: not treated by Havill and Foottit 2007
- pruni*** Scopoli 1763: 140
Objective status: available and valid
Subjective status: valid as *Cacopsylla pruni*
 (Psylloidea Psyllidae)
- pulchra*** Zetterstedt 1840: 309
Objective status: available and valid
Subjective status: valid as *Cacopsylla pulchra*
 (Psylloidea Psyllidae)

- punctiformis** Boisduval 1867: 330
Objective status: available, *nomen dubium*
Subjective status: placement unknown
- pyri** Linnaeus 1758: 454
Objective status: available and valid
Subjective status: valid as *Cacopsylla pyri*
 (Psylloidea Psyllidae)
- quercus** Linnaeus 1758: 453
Objective status: available, *nomen dubium*
Subjective status: placement unknown
- quercus** Fourcroy 1785: 229
Objective status: available and valid
Subjective status: junior synonym of *Eulacanium tiliae* (Linnaeus 1758: 456) (Coccoidea Coccidae)
- radicum purpureus** Geoffroy 1762: 504
Objective status: unavailable, suppressed
 (Hemming 1954)
- reniformis** Fourcroy 1785: 230
Objective status: available and valid
Subjective status: junior synonym of *Kermes quercus* (Linnaeus 1758: 455) (Coccoidea Kermesidae)
- rhamni** Schrank 1801: 141
Objective status: available and valid
Subjective status: valid as *Trioza rhamni* (Psylloidea Triozidae)
Remarks: described as *Chermes rhamni*; the spelling *rhamni* is preserved under Article 33.3.1 of the ICBN (1999)
- roboris** Fourcroy 1785: 229
Objective status: available and valid
Subjective status: valid as *Kermes roboris* (Coccoidea Kermesidae)
- rotundus quercus** Olivier 1792: 440
Objective status: unavailable, trinomial
Remarks: the available name of the species described by Olivier is *Eulacanium tiliae* (Linnaeus 1758: 456) (Coccoidea Coccidae)
- salicis** Linnaeus 1758: 454
Objective status: unavailable, *nomen nudum*
- salicis** Linnaeus 1761: 264
Objective status: available, *nomen dubium*
Subjective status: *nomen dubium* as *Trioza salicis* (L.) (Löw 1882: 249) (Psylloidea Triozidae)
- salicis** Olivier 1792: 439
Objective status: available and valid
Subjective status: junior synonym of *Eulacanium tiliae* (Linnaeus 1758: 456) (Coccoidea Coccidae)
- senecionis** Scopoli 1763: 140
Objective status: available and valid
Subjective status: valid as *Trioza senecionis* (Psylloidea Triozidae)
- sericeus** Fourcroy 1785: 230
Objective status: available and valid
Subjective status: valid as *Pulvinaria sericea* (Coccoidea Coccidae)
- sibiricus** Cholodkovsky 1889b: 388
Objective status: available and valid
Subjective status: junior synonym of *Pineus cembrae* (Cholodkovsky 1888: 47) (Aphidomorpha Adelgidae)
- similis** Gillette 1907: 15
Objective status: available and valid
Subjective status: valid as *Pineus similis* (Aphidomorpha Adelgidae)
- sorbi** Linnaeus 1767: 738
Objective status: available and valid
Subjective status: valid as *Cacopsylla sorbi* (Psylloidea Psyllidae)
- strobi** Ratzeburg 1844: 203
Objective status: available, junior objective synonym of *Pineus strobi* (Hartig 1839: 643) (Aphidomorpha Adelgidae)
Remarks: Ratzeburg (1844) correctly indicates a Hartig (1839) authorship, but Eastop and Hille Ris Lambers (1976: 188) designate *Chermes strobi* Ratzeburg 1844 (=*Coccus strobis* Hartig

- 1839) as the type species for *Eopineus* Steffan 1968, thereby making it available
- strobilobius*** Kaltenbach 1843: 203
Objective status: available and valid
Subjective status: junior synonym of *Adelges laricis* Vallot 1836: 72 (Aphidomorpha Adelgidae)
- tardoides*** Cholodkovsky 1911: 175
Objective status: available and valid
Subjective status: valid as *Adelges tardoides* (Aphidomorpha Adelgidae)
Remarks: described as *Chermes lapponicus* var. *tardoides*
- tardus*** Dreyfus 1888: 3
Objective status: available and valid
Subjective status: valid as *Adelges tardus* (Aphidomorpha Adelgidae)
- taxi*** Buckton 1886: 327
Objective status: available, *nomen dubium*
Subjective status: placement unknown
Remarks: *Pseudococcus taxi* in Lindinger (1912: 320) (Coccoidea Pseudococcidae)
- tiliae hemisphaericus*** Geoffroy 1762: 507
Objective status: unavailable, suppressed (Hemming 1954)
- ulmi*** Linnaeus 1758: 453
Objective status: available and valid
Subjective status: valid as *Eriosoma ulmi* (Aphidomorpha Aphididae)
- ulmi*** Fourcroy 1785: 229
Objective status: available and valid
Subjective status: junior synonym of *Eulacanium tiliae* (Linnaeus 1758: 456) (Coccoidea Coccidae)
- urticae*** Linnaeus 1758: 454
Objective status: available and valid
Subjective status: valid as *Trioza urticae* (Psylloidea Triozidae)
- vermilio*** Planchon 1864: 19
Objective status: available and valid
Subjective status: valid as *Kermes vermilio* (Coccoidea Kermesidae)
- viridanus*** Cholodkovsky 1896: 39
Objective status: available and valid
Subjective status: valid as *Adelges viridanus* (Aphidomorpha Adelgidae)
- viridis*** Ratzeburg 1843: 202
Objective status: available and valid
Subjective status: valid as *Adelges viridis* (Aphidomorpha Adelgidae)
- viridula*** Zetterstedt 1828: 555
Objective status: available and valid
Subjective status: valid as *Trioza viridula* (Psylloidea Triozidae)
- viridulus*** Cholodkovsky 1911: 175
Objective status: available and valid
Subjective status: valid as *Adelges viridulus* (Aphidomorpha Adelgidae)
- vitis oblongus*** Geoffroy 1762: 506
Objective status: unavailable, suppressed (Hemming 1954)
- zetterstedti*** Thomson 1877: 832
Objective status: available and valid
Subjective status: valid as *Cacopsylla zetterstedti* (Psylloidea Psyllidae)
